

White Paper rev. 0.1

The Project Based on Proof of Friendship in the TON Ecosystem

DISCLAIMER

This White Paper is in no way an incentive to invest, information purposes only!

Introduction

The project is a Telegram mini-application where users participate in a referral network and receive rewards in TON cryptocurrency and virtual FrenPoints tokens. FrenPoints will eventually be converted into a new cryptocurrency that can be sold or used within the ecosystem. The project combines elements of a crypto wallet and a referral system, enabling users to expand their network and earn rewards.

However, this is just the beginning. The project is set to evolve into a full-fledged ecosystem, incorporating multiple applications, advanced features, and powerful tools to support both casual users and professional traders.

Project Description

At the core of the project lies the concept of Proof of Friendship — an alternative to the existing Proof of Work and Proof of Stake, but focused on social interactions and network growth. Users can join the project only through a referral link and are rewarded for inviting new participants.

A user joining via a referral link becomes a referral of the inviter and completes a few simple steps to fully participate in the system:

1. Connect a TON Wallet
2. Transfer 1 TON to ten predecessors
3. Subscribe to the project's Telegram channel and bookmark the website

After completing these steps, the user receives a unique referral link and can start inviting others.

Technological Architecture

The project utilizes:

- TON Blockchain — for storing user information and transaction data.
- Smart Contracts — to ensure fair and automated reward distribution.
- Referral System — built into TON and based on Proof of Friendship, where each user grows their network and earns rewards in TON and FrenPoints.

As the project evolves, it will integrate advanced technologies, such as AI-powered trading bots, multi-chain wallet capabilities, and unique crypto trading platforms.

Tokenomics

The reward system consists of two key components:

- TON — the base cryptocurrency that users earn for inviting new participants.
 - FrenPoints — virtual tokens earned for participation, which will be exchanged for a new cryptocurrency within the ecosystem in 3-4 months.
-

Participation Levels and Network Structure

The project features a multi-level system:

1. First Level — A user can invite up to 5 active participants.
2. Second Level — Once the first level is filled, invited users form the second level, consisting of 25 participants.
3. Third Level and Beyond — The structure continues to expand, forming up to 10 levels, with each level increasing the network size exponentially.

Each new user across 10 levels transfers a reward of 1 TON and grants FrenPoints based on the level they join. After all 10 levels are filled, users will continue to earn FrenPoints but will stop receiving rewards in TON.

Future Ecosystem Expansion

The project is not limited to the initial referral and reward model. Over time, it will transform into a robust ecosystem, encompassing a wide range of interconnected applications and tools:

Roadmap Highlights:

Q4 2024:

- ✓ Launching the FTBooster App
- ✓ Developing a marketing strategy
- ✓ Expanding geographic coverage
- 🚀 Beta testing of Trading Bots with Signals

Q1 2025:

- 🚀 Integration of a multi-currency wallet
- 🚀 TGE and AirDrop distribution
- 🚀 Listing on crypto exchanges
- 🚀 Launching Trading Bots with Signals

Q2 2025:

-  Launching the Booster App for our cryptocurrency
-  Developing a unique crypto trading platform powered by AI

Q3 2025:

-  UCTP (Unique Crypto Trading Platform) improvements

Q4 2025:

-  Expanding the Booster App to support more cryptocurrencies
-  Further UCTP improvements
-  Ambitious strategic growth plans

This roadmap reflects the long-term vision of the project: creating an ecosystem that seamlessly blends financial tools, referral incentives, and advanced trading functionalities.

Advantages and Uniqueness

The project stands out with:

- Proof of Friendship — Rewards based on social connections.
 - Multi-Rewards Economy — Users earn both TON and FrenPoints, which can later be utilized.
 - Scalable Ecosystem — Continuous integration of advanced tools and applications to expand user benefits.
 - Active User Support — The ability to build a network and continue earning by inviting new users and supporting others in the network.
-

Plans and Roadmap

The development roadmap outlines a clear step-by-step plan for growth, with each milestone designed to bring additional value to users and expand the ecosystem's capabilities. The project will continue to integrate new technologies, offer innovative tools, and grow into a comprehensive ecosystem for digital finance and social engagement.

Conclusion

The project offers a unique interaction model focused on network growth and reward distribution. With Proof of Friendship at its core, users can participate from the early stages, grow their network, and earn rewards while contributing to the project's success.

As the ecosystem evolves, it promises to become a multi-faceted platform offering cutting-edge financial tools, crypto trading capabilities, and rewarding social interactions, setting a new standard in the blockchain space.

Legal Disclaimer

This White Paper is published solely to inform the community about the FTBooster project and its vision. Nothing in this White Paper constitutes an offer to sell or an incentive to buy any tokens. Furthermore, it should not be interpreted as a guarantee or promise regarding the future development of the FTBooster ecosystem, the utility, or the value of any tokens associated with the project.

The White Paper outlines our current plans and strategic roadmap, which are subject to adjustments as the project evolves. The success of these plans depends on numerous external factors beyond FTBooster's control, including market conditions, technological advancements, regulatory changes, and trends within the cryptocurrency and blockchain industries.

We remain committed to transparency and continuous communication with our community as we work towards building a robust and innovative ecosystem driven by the principles of Proof of Friendship.
